![Security Journey logo] **SECURITY JOURNEY**

We help enterprises reduce vulnerabilities through application security education for developers and everyone in the SDLC.

Overview Brochure

Change the paradigm. Train your entire SDLC team.

Strong application security isn't a destination, it's a journey. One that requires a security-first mindset across your entire SDLC team. We offer programmatic, multi-year training and education programs that teach developers secure coding strategies and provide all learners with a strong foundational understanding of security vulnerabilities, threats, and best practices.

Education for All

360° of security training that includes all roles in the SDLC, not just developers

- Role-based training, customizable to your organization's style and requirements
- Short, 20-30 minute lessons keep learners engaged and assessments strengthen learning in real time
- Learning paths for every level of application security knowledge, from beginner to expert

Beyond Security Awareness

Immersive learning that teaches the skills and knowledge needed for a security-first mindset

- Transform compliance from an obligation to a learning opportunity that teaches instantly applicable strategies
- Three advanced learning paths help developers become security champions
- Real-world offensive and defensive training lessons in live sandboxes

Engaging and Effective Learning

Easy to digest lessons that make learning fun and deliver a 70% increase in knowledge

- Hundreds of lessons available in multiple formats (video, text-based, assessments) with new lessons added every quarter
- Personal learning journal to record notes, resource links, and more
- Conversational videos featuring leading security experts

Vulnerability Driven Training

Learn Skills based on actual, emerging vulnerabilities and threats, including OWASP Top 10

- Customizable learning paths based on your organization's unique opportunities for security improvement
- Lessons created with input from security industry experts
- Integration with AppSec tools to create training plans based on your app's actual vulnerabilities and past developer performance

Learning Management Simplified

An easy to administer, enterprise-class solution offered in a multi-year programmatic format

- Easy administration with LMS API integration, automated email/Slack reminders, learner tracking and reports, GITHub training check, and more
- Measurable knowledge gain and proficiency scoring
- Compliance certificate export

Security Journey

Learning for All SDLC Teams

Security Journey's platform delivers engaging content in multiple formats to build a security culture across your entire team, from beginners to experts. It teaches best practices and defensive tactics for application and product security in a multi-year program that's scalable and easy to administer.

Platform Features

- Proven educational program that increases knowledge by as much as 70%
- Training for everyone who contributes to the SDLC
- Multi-year, programmatic approach
- Tournaments that drive engagement at all experience levels
- Customizable interface to match your culture

Educational Content

- 350+ lessons updated monthly
- Conversational security videos with embedded exercises
- Multi-path programs for beginners to security champion levels

Programming Languages and Technologies

Swift, DevSecOps, Ruby, Python, TypeScript, C#/.Net, Web Application Security Testing, C/C++, API, R, AWS, JavaScript/Node.js, Docker, Kubernetes, Java, Mobile General, Kotlin, Terraform, GO, PHP

Course Languages Available

English

HackEDU

Maximum Developer Engagement

HackEDU's secure coding training platform provides hands-on training that engages developers and creates expertise. Developers learn by writing actual code (not just reviewing code snippets). The platform incorporates proven, learning science-based principles to maximize engagement and effectiveness.

Platform Features

- 95% of developers learn to find and fix SQL injection vulnerabilities in less than 10 minutes
- Easy to deploy training plans
- Automated communications with learners
- Training automation via integration with AppSec tools (patent pending)
- Impact Reports

Educational Content

- 80+ lessons
- Live sandbox format for immediate application of learned concepts
- Specifically written for developers
- Offensive and defensive training

Programming Languages and Technologies

Swift, DevSecOps, Ruby, Python, TypeScript, C#/.Net, Web Application Security Testing, C/C++, API, R, AWS, JavaScript/Node.js, Docker, Kubernetes, Java, Mobile General, Kotlin, Terraform, GO, PHP

Course Languages Available

English, Spanish, Simplified Chinese, Korean, French Canadian, Portuguese

---

HackEDU's spring 2022 acquisition of Security Journey brings together two powerful platforms to provide application security education for developers and the entire SDLC team. The two officially became one in August 2022 and are now Security Journey. Two platforms, one path to build a security-first development culture.
